

Occupational Health and Safety Courses

Know your responsibilities and get up to speed on the Occupational Health and Safety Act by participating in one of our many occupational health and safety training programs. In addition to the following key industry recognised courses, we offer a range of specialist short courses in areas such as testing and tagging, safe work method statement (SWMS) development and asbestos removal.

COURSE	DESCRIPTION	DURATION*
Construction Induction Training (CIT)	Participants will be issued with the WorkSafe Construction Induction Card on successful completion of CPCCOHS1001A Work Safely in the Construction Industry. Minimum requirement and mandatory for all on building and construction worksites.	6 hours plus assessment session
Certificate III in Occupational Health and Safety	Nationally accredited and fully portable to other industries. Entry point for becoming an OHS supervisor or site manager in domestic or commercial sectors. Also recommended for those seeking Commercial Limited Registration.	6 days OR online
Certificate IV in Occupational Health and Safety	Nationally accredited and fully portable to other industries. Ideally suited to those in middle management such as project managers and construction managers with health and safety duties. Suitable for those wanting to build on skills acquired in Certificate III in Occupational Health and Safety.	8 days
Diploma of Occupational Health and Safety	Nationally accredited and fully portable to other industries. For senior managers and full time OHS professionals dealing with strategic OHS policy issues - and who have completed the Certificate IV in Occupational Health and Safety.	10 days
Construction Supervisors Course	Develops management, leadership and team-building skills. Incorporates: Industrial Relations, Leadership, Construction Planning, Site Administration and current OHS legislation. For frontline managers, construction foreman and supervisors who have completed the Construction Induction Training (CIT) course.	5 days
Occupational Health and Safety (BRC)	This module of the Certificate IV in Building and Construction (Building) covers regulations and responsibilities relevant to domestic builders and hazard identification, risk assessment and safe work method statement development process. For domestic builders and those with 3 years industry experience who are preparing for builder registration.	1 day
